POLICY JUSTIFICATION

Netherlands – SM-2 Block IIIA STANDARD Missiles

The Government of the Netherlands has requested a possible sale of 55 SM-2 Block IIIA STANDARD missiles, 55 MK 13 MOD 0 canisters, containers, spare and repair parts, supply support, personnel training and training equipment, publications and technical data, U.S. Government and contractor technical assistance and other related elements of logistics support. The estimated cost is \$70 million.

The proposed sale will contribute to the foreign policy and national security objectives of the United States by helping to improve the military capabilities of the Netherlands, a NATO ally, and furthering standardization and interoperability.

The proposed sale will provide the Netherlands continued NATO anti-aircraft defense capabilities for its Navy. The evolution of the anti-aircraft warfare threat in littoral nations mandates this defense capability. The Netherlands Navy intends to use the SM-2 missiles on its destroyer class surface ships for self-defense against air and cruise missile threats in the Netherlands and the NATO theater. The Netherlands, which already has STANDARD missiles in its inventory, will have no difficulty absorbing these additional missiles.

The proposed sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be Raytheon Systems Company of Tucson, Arizona. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government or contractor representatives to the Netherlands.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 04-33**Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act****Annex
Item No. vii****(vii) Sensitivity of Technology:**

1. The SM-2 Block IIIA STANDARD missile is a U.S. Navy surface-launched guided missile and is classified Confidential. It is operationally deployed on cruisers, destroyers, and frigates for use against air and surface threats (aircraft, missiles, and ships). The guidance system employs a continuous-wave or interrupted continuous wave radar link for homing to the target. Steering and roll commands from the adaptive auto pilot system provide flight stability via four aft-mounted control surfaces. Propulsion is provided by a solid propellant, dual thrust rocket motor, which is an integral part of the missile airframe. The target-detecting device is a complex fuze with dual radar systems to optimize warhead lethality against a spectrum of target sizes and speeds. The telemeter unit transmits missile performance data to ground stations to be analyzed for accuracy of missile/target scenario. Certain operation frequencies and performance characteristics are classified Secret.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures or equivalent systems which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

3. A determination has been made that the Netherlands can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.
