Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the

Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call 404-639-5960 or send comments to Maryam I Daneshvar, CDC Acting Reports Clearance Officer, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an e-mail to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Evaluation of health communication messages for Infertility Prevention Campaign—New—National Center for HIV, Hepatitis, Sexually Transmitted Disease Prevention, and Tuberculosis Prevent (NCHHSTP), Division of Sexually Transmitted Disease Prevention (DSTDP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Chlamydia is among the leading causes of pelvic inflammatory disease (PID), which can lead to infertility, ectopic pregnancy, and chronic pelvic pain. Most cases of Chlamydia are asymptomatic so infected girls and women are unaware of their infections. CDC estimates that in 2005, young women aged 15 to 19 years had the highest Chlamydia rate, i.e. 2,797 infected persons per 100,000 populations, followed by women aged 20 to 24 where the rate was 2,691 infected persons per 100,000 population. These rates are likely to be underestimates, because many infected persons do not seek medical care and testing. Data at CDC suggest that Chlamydia develops into PID in up to 40% of untreated women and that 12% of women are infertile after their first experience with PID.
