

concentrations of O₃ in the ambient air and one for measuring SO₂ in the ambient air. These designations are made under the provisions of 40 CFR Part 53, as amended on December 18, 2006 (71 FR 61271).

The new reference method for NO_x is an automated method (analyzer) utilizing the measurement principle based on gas phase chemiluminescence and the calibration procedure specified in Appendix F of 40 CFR part 50. This newly designated reference method is identified as follows:

RFNA-0809-186, "Ecotech Serinus 40 Oxides of Nitrogen Analyzer", operated in the range of 0–0.5 ppm, with a five-micron Teflon® filter element installed, and with the following selected: Control Loop-Enabled, Diagnostic Mode-Operate, Pres/Temp/Flow Compensation-Enabled, Span Compensation-Disabled, with concentration automatically corrected for temperature and pressure changes, and operated according to the Serinus 40 Oxides of Nitrogen Analyzer User Manual.

The new equivalent method for O₃ is an automated method that utilizes a measurement principle based on non-dispersive ultraviolet absorption photometry. The newly designated equivalent method for O₃ is identified as follows:

EQOA-0809-187, "Ecotech Serinus 10 Ozone Analyzer", operated in the range of 0–0.5 ppm, with a five-micron Teflon® filter element installed, and with the following selected: Control Loop-Enabled, Diagnostic Mode-Operate, Pres/Temp/Flow Compensation-Enabled, Span Compensation-Disabled, with concentration automatically corrected for temperature and pressure changes, and operated according to the Serinus 10 Ozone Analyzer User Manual.

The new equivalent method for SO₂ is an automated method (analyzer) that utilizes a measurement principle based on ultraviolet fluorescence. The newly designated equivalent method for SO₂ is identified as follows:

EQSA-0809-188, "Ecotech Serinus 50 Sulfur Dioxide Analyzer", operated in the range of 0–0.5 ppm, with a five-micron Teflon® filter element installed, and with the following selected: Background-Enabled, Control Loop-Enabled, Diagnostic Mode-Operate, Pres/Temp/Flow Compensation-Enabled, Span Compensation-Disabled, with concentration automatically corrected for temperature and pressure changes, and operated according to the Serinus 50 Sulfur Dioxide Analyzer User Manual.

Applications for the reference method and equivalent method determinations for these candidate methods were received by the EPA on March 19, 2008, April 22, 2009 and June 22, 2009, respectively. The monitors are commercially available from the applicant, Ecotech Pty. Ltd., 1492

Ferntree Gully Road, Knoxfield, Victoria, 3180, Australia.

Test analyzers representative of these methods have been tested in accordance with the applicable test procedures specified in 40 CFR Part 53 (as amended on December 18, 2006). After reviewing the results of those tests and other information submitted by the applicant in the respective applications, EPA has determined, in accordance with Part 53, that these methods should be designated as a reference or equivalent method, as appropriate. The information submitted by the applicant in the respective applications will be kept on file, either at EPA's National Exposure Research Laboratory, Research Triangle Park, North Carolina 27711 or in an approved archive storage facility, and will be available for inspection (with advance notice) to the extent consistent with 40 CFR Part 2 (EPA's regulations implementing the Freedom of Information Act).

As designated reference or equivalent methods, these methods are acceptable for use by states and other air monitoring agencies under the requirements of 40 CFR Part 58, Ambient Air Quality Surveillance. For such purposes, each method must be used in strict accordance with the operation or instruction manual associated with the method and subject to any specifications and limitations (e.g., configuration or operational settings) specified in the applicable designated method description (see the identifications of the methods above).

Use of the method should also be in general accordance with the guidance and recommendations of applicable sections of the "Quality Assurance Handbook for Air Pollution Measurement Systems, Volume I," EPA/600/R-94/038a and "Quality Assurance Handbook for Air Pollution Measurement Systems, Volume II, Ambient Air Quality Monitoring Program" EPA-454/B-08-003, December, 2008 (available at <http://www.epa.gov/ttn/amtic/qabook.html>). Vendor modifications of a designated equivalent method used for purposes of Part 58 are permitted only with prior approval of the EPA, as provided in Part 53. Provisions concerning modification of such methods by users are specified under Section 2.8 (Modifications of Methods by Users) of Appendix C to 40 CFR Part 58.

In general, a method designation applies to any sampler or analyzer which is identical to the sampler or analyzer described in the application for designation. In some cases, similar samplers or analyzers manufactured prior to the designation may be

upgraded or converted (e.g., by minor modification or by substitution of the approved operation or instruction manual) so as to be identical to the designated method and thus achieve designated status. The manufacturer should be consulted to determine the feasibility of such upgrading or conversion.

Part 53 requires that sellers of designated reference or equivalent method analyzers or samplers comply with certain conditions. These conditions are specified in 40 CFR 53.9.

Aside from occasional breakdowns or malfunctions, consistent or repeated noncompliance with any of these conditions should be reported to: Director, Human Exposure and Atmospheric Sciences Division (MD-E205-01), National Exposure Research Laboratory, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711.

Designation of these new reference and equivalent methods is intended to assist the States in establishing and operating their air quality surveillance systems under 40 CFR Part 58. Questions concerning the commercial availability or technical aspects of the method should be directed to the applicant.

Jewel F. Morris,

Acting Director, National Exposure Research Laboratory.

SUPPLEMENTARY INFORMATION:

I. Information About the Document

Section 108(a) of the Clean Air Act directs the Administrator to identify certain pollutants which, among other things, "cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare" and to issue air quality criteria for them. These air quality criteria are to "accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of [a] pollutant in the ambient air. * * * Under section 109 of the Act, EPA is then to establish national ambient air quality standards (NAAQS) for each pollutant for which EPA has issued criteria. Section 109(d) of the Act subsequently requires periodic review

and, if appropriate, revision of existing air quality criteria to reflect advances in scientific knowledge on the effects of the pollutant on public health or welfare. EPA is also to revise the NAAQS, if appropriate, based on the revised air quality criteria.

Particulate matter (PM) is one of six principal (or "criteria") pollutants for which EPA has established NAAQS. Periodically, EPA reviews the scientific basis for these standards by preparing an Integrated Science Assessment (ISA) (formerly called an Air Quality Criteria Document). The ISA and supplementary annexes, in conjunction with additional technical and policy assessments, provide the scientific basis for EPA decisions on the adequacy of the current NAAQS and the appropriateness of possible alternative standards. The Clean Air Scientific Advisory Committee (CASAC), an independent science advisory committee whose existence and whose review and advisory functions are mandated by Section 109(d)(2) of the Act, is charged (among other things) with independent scientific review of EPA's air quality criteria.

On June 28, 2007 (72 FR 35462), EPA formally initiated its current review of the air quality criteria for PM, requesting the submission of recent scientific information on specified topics. A draft of EPA's "Integrated Review Plan for the National Ambient Air Quality Standard for Particulate Matter" (EPA/452/P-08-006) was made available in October 2007 for public comment and was discussed by the CASAC PM Review Panel via a publicly accessible teleconference consultation on November 30, 2007 (72 FR 63177). EPA finalized the plan and made it available in March 2008 (EPA/452/R-08-004; http://www.epa.gov/ttn/naaqs/standards/pm/s_pm_2007_pd.html). In June 2008 (73 FR 30391), EPA held a workshop to discuss, with invited scientific experts, initial draft materials prepared in the development of the PM ISA and its supplementary annexes.

The First External Review Draft ISA for PM (EPA/600/R-08/139 and EPA/600/R-08/139A; <http://cfpub.epa.gov/ncea/cfm/recordisplay.cfm?deid=201805>) was released on December 22, 2008 (73 FR 77686). This document was reviewed by the CASAC and discussed at a public meeting on April 1 and 2, 2009 (74 FR 7688). The CASAC held a follow-up public teleconference on May 7, 2009 (74 FR 18230) to review and approve the CASAC PM Review Panel's draft letter providing comments to the Agency on the First External Review Draft ISA for PM (<http://yosemite.epa.gov/sab/sab>

[product.nsf/73ACCA834AB44A10852575BD0064346B/\\$File/EPA-CASAC-09-008-unsigned.pdf](http://product.nsf/73ACCA834AB44A10852575BD0064346B/$File/EPA-CASAC-09-008-unsigned.pdf)).

The second external review draft ISA for PM will be reviewed and discussed by CASAC at a public meeting. Public comments received will be provided to the CASAC PM Review Panel. A future **Federal Register** notice will inform the public of the exact date and time of that CASAC meeting.
