

Six species of shellfish are harvested in the area, including soft-shell clams, surf clams, blue mussels, razor clams, oysters, and ocean quahogs. In 2007 and 2008, two million pounds of shellfish were harvested in Greater Essex with a value of \$2.5 million for the communities of Gloucester, Essex, and Ipswich.

The coastal area along the Upper North Shore of Massachusetts is important for the tourism and recreation industries of the region, including Salisbury Beach State Reservation, Sandy Point State Reservation, Halibut Point State Park, Maudslay State Park, and more than 25 marinas or boat yards are adjacent to the proposed NDA. This

area is a popular destination for boaters due to its natural environmental diversity and would benefit from a No Discharge Area.

The Commission's Office of Strategic Policy and Planning Analysis and the Consumer and Intergovernmental Affairs Bureau plan to conduct a hardware-based test and analysis of 11,000 consumer broadband connections to examine the performance of services across a number of parameters. This survey is crucial to comparing what consumers know – and need to know – about the speeds and performance, and terms and conditions of broadband and related services to services purchased.

The Commission has contracted with SamKnows, Inc. to measure the speeds and performance of a representative, cost-effective, statistically relevant sample of US fixed broadband households across geographies, technologies and providers. This measurement will occur on an opt-in, voluntary basis. This representative sample will be used to create a baseline level of performance and measurements for the FCC. The third party measurement contractor will deploy testing devices to begin measurement, and these results will be then used to inform measurement standards for performance of broadband services, in support of the FCC-led National Broadband Plan.
