

Columbia, the Chesapeake Bay Commission Chair, and the EPA Administrator).

What is the scope of the Bay TMDL? The Bay TMDL addresses all segments of the Chesapeake Bay and its tidal tributaries. The Bay TMDL consists of 92 TMDLs, addressing nitrogen, phosphorus and sediment, for each of the 92 segments in the Bay and tidal tributaries. EPA intends that the Bay TMDL will be established at a level necessary to ensure attainment of water quality standards in each of these segments. In addition, the Bay TMDL assigns individual and (as appropriate) aggregate maximum daily allowable point source and nonpoint source loadings, called wasteload allocations (WLAs) and load allocations (LAs), respectively, across all jurisdictions within the Bay watershed. When completed, the Bay TMDL will be the largest, most complex TMDL in the country, covering a 64,000 square mile area in six states and the District of Columbia.

How will the TMDL promote nitrogen, phosphorus and sediment reductions? Under the CWA, the TMDL will establish the watershed pollution budget for nutrients and sediment necessary to meet water quality standards in the Bay. Other provisions of the CWA, as well as the jurisdictions' Watershed Implementation Plans (WIPs), are intended to implement the TMDL. During TMDL development, EPA worked with its partners, the Bay jurisdictions, to assist them in developing individual jurisdiction-specific WIPs, which collectively serve as part of the overall TMDL implementation framework. Those WIPs are not part of the Bay TMDL itself but are part of the TMDL record and help provide reasonable assurance that the necessary nutrient and sediment reductions identified in the TMDL will be achieved. The WIPs identify specific nutrient and sediment reduction targets by geographic location and sector to achieve allowable loadings, as well as a description and schedule of actions that the jurisdictions will take to achieve these reductions.

In accordance with EO 13508, EPA and the jurisdictions also will provide the next set of two-year milestone commitments specifying what source controls will be taken to reduce nitrogen, phosphorus and sediment during that period. EPA has invited each jurisdiction to present information on its WIP at the meeting(s) and/or webinar(s) within its jurisdiction. At these meetings EPA will be available to answer questions on the TMDL and how the WIPs will inform the TMDL. Any

questions or comments regarding the substance of the individual WIPs, or the WIPs themselves should be addressed to the individual jurisdiction. Links to the WIPs are available at <http://www.epa.gov/chesapeakebaytmdl>.

For information on the jurisdictions' Draft WIPs and procedures for submitting comments, please contact the jurisdiction representatives below.
