

II. Summary of Draft Supplement to the EA

Pa'ina's license authorizes it to use byproduct material (sealed radioactive sources) in a pool irradiator to be located adjacent to Honolulu International Airport, Honolulu, Hawaii. The irradiator would be used for the production and research irradiation of food, cosmetic, and pharmaceutical products. Pa'ina's license request was previously noticed in the **Federal Register** on August 2, 2005 (70 FR 44396), with a notice of an opportunity to request a hearing.

The staff prepared an EA in support of its review of the license application. The staff considered impacts to areas such as public and occupational health, transportation, socioeconomic, ecology, water quality, and the effects of aircraft crashes and natural phenomena.

The staff has prepared a Draft Supplement to the EA as directed by the Board. In the first area identified by the Board, the staff found that accidents occurring during the transport of cobalt-60 to or from Pa'ina's proposed irradiator will not cause a significant impact to the environment. This is due primarily to the very low likelihood cobalt-60 will be released from a shipping package. The low likelihood of release is due to several factors, including the small number of cobalt-60 shipments to Pa'ina's irradiator and the stringent safety requirements for the design of cobalt-60 shipping packages. In the second area identified by the Board, the staff found that the environmental impacts of an electron-beam irradiator will be small for each resource area. The staff also found that the impacts will not be significantly different than those associated with construction and operation of a cobalt-60 irradiator. In the third area identified by the Board, the staff found that impacts associated with construction and operation of a cobalt-60 irradiator at alternative sites will be small and will not be significantly different than those at the proposed site. In particular, the staff found that aircraft crashes involving the alternative sites will have no significant impact on public health and safety. The staff also found that environmental impacts from earthquakes, tsunamis, and hurricanes at the alternative locations will be small.

[NRC-2010-0371]

Notice of Availability of the Models for Plant-Specific Adoption of Technical Specifications Task Force (TSTF) Traveler TSTF-431, Revision 3, "Change in Technical Specifications End States (BAW-2441)"

AGENCY: Nuclear Regulatory Commission (NRC).

ACTION: Notice of availability.

SUMMARY: As part of the consolidated line item improvement process (CLIP), the NRC is announcing the availability of the model application (with model no significant hazards consideration (NSHC) determination) and model safety evaluation (SE) for the plant-specific adoption of Technical

Specifications Task Force (TSTF) Traveler TSTF-431, Revision 3, "Change in Technical Specifications End States (BAW-2441)." TSTF-431, Revision 3, is available in the Agencywide Documents Access and Management System (ADAMS) under Accession Number ML093570241. The proposed changes revise the Standard Technical Specifications (STS) to permit, for some systems, entry into a hot shutdown (Mode 4) end state rather than a cold shutdown (Mode 5) end state. These changes are associated with the implementation of Topical Report BAW-2441-A, Revision 2, "Risk-Informed Justification for LCO End-State Changes." The CLIIP model SE will facilitate expedited approval of plant-specific adoption of TSTF-431, Revision 3.

SUPPLEMENTARY INFORMATION: TSTF-431, Revision 3, is applicable to Babcock & Wilcox reactor plants. Licensees opting to apply for this TS change are responsible for reviewing TSTF-431, Revision 3, and the NRC staff's SE, providing any necessary plant-specific information, and assessing the completeness and accuracy of their license amendment request (LAR). It is acceptable for licensees to use plant-specific system names, TS numbering and titles. The NRC will process each amendment application responding to this notice of availability according to applicable NRC rules and procedures.

The models do not prevent licensees from requesting an alternate approach or proposing changes other than those proposed in TSTF-431, Revision 3. However, significant deviations from the approach recommended in this notice or the inclusion of additional changes to the license require additional NRC staff review and would not be reviewed as a part of the CLIP. This may increase the time and resources needed for the review or result in NRC staff rejection of the LAR. Licensees desiring significant deviations or additional changes should instead submit an LAR that does not claim to adopt TSTF-431, Revision 3.

Dated at Rockville, Maryland, this 23rd day of November 2010.
