

approach may allow estimation of data-derived uncertainty factors that consider use of toxicokinetic and toxicodynamic data to inform quantitative extrapolations for interspecies differences and human variability in dose response assessment. The topics to be covered in the February 2011 SAP are consistent with EPA's Office of Pesticide Programs continuing efforts to improve the scientific basis for risk assessment by broadening the application of probabilistic exposure techniques and PBPK models. The Agency has a conceptually similar effort on-going to link PBPK models for pyrethroids with Stochastic Human Exposure and Dose Simulator (SHEDS) exposure software, a probabilistic exposure model developed by the EPA's Office of Research and Development, which was reviewed by the SAP in July 2010. The current effort by Dow AgroSciences is a research effort which may, if sufficiently robust, inform future risk assessments; the February meeting is a key milestone in this research. The Agency will solicit feedback from the Panel on technical issues related to PBPK/PD model, the proposed approach for merging the PBPK/PD model with CARES, and the use of such merged models in risk assessment.

C. FIFRA SAP Documents and Meeting Minutes

The draft document was prepared by the National Center for Environmental Assessment within EPA's Office of Research and Development. The draft document provides an overview of the types and mechanisms underlying the lymphohematopoietic cancers induced by chemical agents and radiation in humans, with a primary emphasis on leukemia and leukemia-inducing agents. In addition, the document also focuses on how mechanistic information on human leukemia-inducing agents can inform risk assessment.

EPA is releasing this draft document solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. This draft document has not been formally disseminated by EPA. It does not represent and should not be construed to represent any Agency policy or determination. All public comments received will be provided to the peer reviewers at the beginning of the review process.

SUPPLEMENTARY INFORMATION:

I. Information About the Project/Document

This project was initiated to better understand the mechanisms underlying the lymphohematopoietic cancers induced by chemical agents in humans. A draft report was developed that provides an overview of types and mechanisms underlying the lymphohematopoietic cancers induced by both chemical agents and radiation in humans, with a primary emphasis on leukemia and leukemia-inducing agents.

Petition for a Ban on Triclosan; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice makes available for review and public comment a petition submitted by Beyond Pesticides, and Food & Water Watch (hereafter referred to as "the petitioners") to the Environmental Protection Agency (hereafter referred to as "EPA" or "the Agency"), asking EPA to use its authority under various statutes to regulate triclosan. Triclosan is an antimicrobial substance used in pesticide products, hand sanitizers, toothpaste, and other consumer products. The petitioners claim that the "pervasive and widespread use" of triclosan poses significant risks to human health and the environment. In addition, the petitioners claim that the agency failed to address the impacts posed by triclosan's degradation products on human health and the environment, failed to conduct separate assessments for triclosan residues in contaminated drinking water and food, and is complacent in seriously addressing concerns related to antibacterial resistance and endocrine disruption. EPA has established a public docket, which contains a copy of the petition and will contain all comments received in response to this notice. The docket may be accessed as described in this notice.

DATES: Comments must be received on or before February 7, 2011.
