I. Background

On December 8, 2010, the President's Council of Advisors on Science and Technology (PCAST) released an important new report entitled "Realizing the Full Potential of Health Information Technology To Improve Healthcare for Americans: The Path Forward" (the PCAST Report). (The full report is available at <http://www.whitehouse.gov/administration/eop/ostp/pcast> and also available on ONC's Web site <http://healthit.hhs.gov>.) PCAST is an advisory group of the nation's leading scientists and engineers who directly advise the President and the Executive Office of the President. PCAST makes policy recommendations in the many areas where understanding of science, technology, and innovation is key to strengthening our economy and forming policy that works for the American people. PCAST is administered by the Office of Science and Technology Policy (OSTP). PCAST's report and its recommendations have significant implications for the nation's HIT agenda and the implementation of the HITECH Act, passed as part of the American Recovery and Reinvestment Act of 2009 (Recovery Act) (Pub. L. 111-5). ONC seeks public comment on the PCAST report's vision and recommendations and how they may be best addressed.

II. Solicitation of Comments

ONC seeks comment on the questions below. Comments on other aspects of the PCAST report are also welcome.

1. What standards, implementation specifications, certification criteria, and certification processes for electronic health record (EHR) technology and other HIT would be required to implement the following specific recommendations from the PCAST report:

- a. That ONC establish minimal standards for the metadata associated with tagged data elements;

- b. That ONC facilitate the rapid mapping of existing semantic taxonomies into tagged data elements;

- c. That certification of EHR technology and other HIT should focus on interoperability with reference implementations developed by ONC.

2. What processes and approaches would facilitate the rapid development
