

existing ATCT would be decommissioned after the ATCT is operational. The increased square footage of the ATCT will provide the capability to meet future expansion requirements. The Base Building design will conform to the guidelines of the Terminal Facilities Design Standards for Base Building and Environmental Support Buildings with a modified slab-on-grade 7,000 SF floor plan. A new link building will connect the two structures, and paved surface parking will be constructed next to the Base Building. A 10-foot security fence will be constructed around the complex. The project will incorporate energy conservation, recycled materials, and green technologies where practicable. In addition, the Runway 28 localizer antenna and shelter will be shifted slightly to maintain optimal operational characteristics. The existing antenna and shelter will be removed once the new equipment is operational.

The new ATCT will accommodate current and future modernization of the NAS, improve visibility of airport surfaces, provide adequate space to improve operational and administrative efficiency, accommodate future air traffic growth and overall, and increase the efficient functionality of the facility.

The Final EA has been prepared in accordance with the National Environmental Policy Act (NEPA) of 1969, as amended, and FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures." In addition, FAA Order 5050.4B, "National Environmental Policy Act (NEPA) Implementing Instructions for Airport Actions" has been used as guidance in the preparation of the environmental analysis.

Issued in Des Plaines, Illinois, on February 19, 2010.
