NUCLEAR REGULATORY COMMISSION

[Docket No. 04000341; NRC-2009-0539]

Notice of Availability of Environmental Assessment and Finding of No Significant Impact For License Amendment to Source Materials License No. STC-133 for Unrestricted Release of The Defense Logistics Agency, DLA Strategic Materials Depot, in New Haven, IN

AGENCY: Nuclear Regulatory Commission.

ACTION: Issuance of Environmental Assessment and Finding of No Significant Impact for License Amendment.

FOR FURTHER INFORMATION CONTACT:

Dennis Lawyer, Health Physicist, Commercial and R&D Branch, Division of Nuclear Materials Safety, Region 1, 475 Allendale Road, King of Prussia, Pennsylvania; telephone 610-337-5366; fax number 610-337-5269 or by e-mail: Dennis.Lawyer@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) is considering the issuance of a license amendment to Source Materials License No. STC-133. This license is held by Defense Logistics Agency, DLA Strategic Materials (the Licensee), for its Depot located on State Route 14 in New Haven, Indiana (the Facility). Issuance of the amendment would authorize release of the Facility for unrestricted use. The Licensee requested this action in a letter dated February 24, 2009. The NRC has prepared an Environmental Assessment (EA) in support of this proposed action

in accordance with the requirements of Title 10, Code of Federal Regulations (CFR), Part 51 (10 CFR Part 51). Based on the EA, the NRC has concluded that a Finding of No Significant Impact (FONSI) is appropriate with respect to the proposed action. The amendment will be issued to the Licensee following the publication of this FONSI and EA in the **Federal Register**.

II. Environmental Assessment

Identification of Proposed Action

The proposed action would approve the Licensee's February 24, 2009, license amendment request, resulting in release of the Facility for unrestricted use. License No. STC-133 was issued on February 14, 1957, pursuant to 10 CFR Part 40, and has been amended periodically since that time. This license authorized the Licensee to have unsealed source material for purposes of storage, sampling, repackaging, and transfer.

The Facility is situated on 268 acres and consists of warehouses and other office and support buildings. The Facility is located in a mixed rural and industrial area. Within the Facility, use of licensed materials was confined to the locations as described in the Licensee's Final Status Survey Report dated January 2009. Locations included outside storage areas covering 2300 square meters; warehouses 210-215 covering 16,054 square meters; and support buildings 136, 141, 145, and 146.

On September 24, 2004, the Licensee ceased licensed activities and initiated a survey and decontamination of the Facility. Based on the Licensee's historical knowledge of the site and the conditions of the Facility, the Licensee determined that only routine decontamination activities, in accordance with their NRC-approved, operating radiation safety procedures, were required. The Licensee was not required to submit a decommissioning plan to the NRC because worker cleanup activities and procedures were consistent with those approved for routine operations (*i.e.*, these procedures could not increase the potential health and safety impacts to workers or the public). The Licensee conducted surveys of the Facility and provided information to the NRC to demonstrate that it meets the criteria in Subpart E of 10 CFR Part 20 for unrestricted release.

Need for the Proposed Action

The Licensee has ceased conducting licensed activities at the Facility, and seeks the unrestricted use of its Facility.

Environmental Impacts of the Proposed Action

The historical review of licensed activities conducted at the Facility shows that such activities involved use of the following radionuclides with half-lives greater than 120 days: natural uranium and thorium mixtures. Prior to performing the final status survey, the Licensee conducted decontamination activities, as necessary, in the areas of the Facility affected by these radionuclides.

The Licensee conducted final status surveys during October and November 2006; June, August, and September 2007; and February 2008. These surveys covered the affected areas of the facility. The final status survey report was attached to the Licensee's amendment request dated February 24, 2009. The Licensee elected to demonstrate compliance with the radiological criteria for unrestricted release as specified in 10 CFR 20.1402 by developing derived concentration guideline levels (DCGLs) for its Facility. The Licensee conducted site-specific dose modeling using input parameters specific to the Facility, which included the soil's site-specific physical properties. The Licensee thus determined the maximum amount of residual radioactivity on building surfaces, equipment, materials and soils that will satisfy the NRC requirements in Subpart E of 10 CFR Part 20 for unrestricted release. The NRC previously reviewed the Licensee's methodology and proposed DCGLs, and concluded that the proposed DCGLs are acceptable for use as release criteria at the Facility. The NRC's approval of the Licensee's proposed DCGLs was published in the **Federal Register** on December 8, 2009 (74 FR 64762). The Licensee's final status survey results were below these DCGLs, and are thus acceptable.

The NRC staff had confirmatory surveys conducted during October 5-8, 2009. Some of the area results indicated a need to perform further investigation sampling. The Licensee completed additional sampling and mitigation and final surveys during July 2010. The NRC staff conducted a follow up confirmatory survey on July 22 and 23, 2010, and performed an inspection of the licensee's sampling, mitigation, and final status survey. None of the final confirmatory sample results exceeded the DCGLs established for the Facility. Based on its review, the staff has determined that the affected environment and any environmental impacts associated with the proposed action are bounded by the impacts
