SUPPLEMENTARY INFORMATION: Public scoping was initiated in the summer of 2009. A newsletter was distributed on May 31, 2009, and a public meeting was held on June 2, 2009, to keep the public informed and involved throughout the planning process. As the lead agency, the NPS conducted several inter-agency/Tribal meetings and one workshop to develop project objectives, identify alternatives, evaluate the benefits of alternatives, and identify a preferred alternative. The selected alternative maximizes bridging by creating conveyance openings through Tamiami Trail by removing 5.5 miles of the existing highway and embankment. Four bridges will be constructed in the opening to replace the removed section of road and maintain vehicle traffic. Bridge down-ramp (access ramps) options were also developed to maintain access to two commercial airboat facilities: Everglades Safari Park and Coopertown. A "Modified Parallel Down Ramp" was selected as the preferred option for Everglades Safari and a "Parallel Down Ramp with Existing Frontage Road" was selected as the preferred option for Coopertown. The selected alternative will increase ecological connectivity by 5.5 miles, reduce flow velocities below the 0.10 feet per second (fps) threshold that causes harm to marshes, and substantially restore the flow patterns associated with a healthy ridge and slough landscape in Northeast Shark River Slough. In addition, the remaining highway embankments along stretches of the road that are not bridged will be reconstructed to raise the crown elevation to 12.3 feet, the minimum required based on the design high water of 9.7 feet and the roadway cross section geometry.
