

511(a) and 404(t) of the CWA if the disagreement concerns water quality certification or other state permits.

(6) If the disagreement concerns coastal zone consistency, the district engineer will follow the reporting requirement of this section and § 336.1(b)(9) of this chapter.

**§ 337.9 Identification and use of disposal areas.**

(a) District engineers should identify and develop dredged material disposal management strategies that satisfy the long-term (greater than 10 years) needs for Corps projects. Full consideration should be given to all practicable alternatives including upland, open water, beach nourishment, within banks disposal, ocean disposal, etc. Within existing policy, district engineers should also explore beneficial uses of dredged material, such as marsh establishment and dewatering techniques, in order to extend the useful life of existing disposal areas. Requests for water quality certification and/or coastal zone consistency concurrence for projects with identified long-term disposal sites should include the length of time for which the certification and/or consistency concurrence is sought. The section 404(b)(1) evaluation and environmental assessment or environmental impact statement should also address long-term maintenance dredging and disposal. District engineers should use the guidance at 40 CFR 230.80 to shorten environmental compliance processing time. The Corps of Engineers will be responsible for accomplishing or assuring environmental compliance requirements for all disposal areas. This does not preclude the adoption of other agencies NEPA documents in accordance with 40 CFR parts 1500 through 1508.

(b) The identification of disposal sites should include consideration of dredged material disposal needs by project beneficiaries. District engineers are encouraged to require local interests, where the project has a local sponsor, to designate long-term disposal areas.

**§ 337.10 Supervision of Federal projects.**

District engineers should assure that dredged or fill material disposal activities are conducted in conformance with current plans and description of the project as expressed in the SOF or ROD. Conditions and/or limitations required by a state (e.g., water quality certification), as identified through the coordination process, should be included in the project specifications. Contracting officers should assure that contractors are aware of their responsibilities for compliance with the terms and conditions of state certifications and other conditions expressed in the SOF or ROD.

**PART 338—OTHER CORPS ACTIVITIES INVOLVING THE DISCHARGE OF DREDGED MATERIAL OR FILL INTO WATERS OF THE U.S.**

Sec.

338.1 Purpose.

338.2 Activities involving the discharge of dredged or fill material into waters of the U.S.

AUTHORITY: 33 U.S.C. 1344.

**§ 338.1 Purpose.**

(a) The procedures of this part, in addition to the provisions of 33 CFR parts 335 through 337, should be followed when undertaking Corps operations and maintenance activities involving the discharge of fill material into waters of the U.S., except that the procedures of part 336 of this chapter will be used in those cases where the discharge of fill material is also the discharge of dredged material, i.e., beach nourishment, within banks disposal for erosion control, etc.

(b) After construction of Corps Civil Works water resource projects, certain operations and maintenance activities involving the discharge of fill material require evaluation under the CWA. These activities generally include lake-shore management, installation of boat ramps, erosion protection along the banks of navigation channels, jetty maintenance, remedial erosion control,
