

§ 404.270

those years. She thus has 15 years of coverage after 1950 and a total of 26 years of coverage. We subtract 10 from her years of coverage, multiply the remainder (16) by \$11.50 and get \$184.00. We then apply the June 1979, June 1980, and June 1981 automatic cost-of-living increases (9.9 percent, 14.3 percent, and 11.2 percent, respectively) to that amount to find her special minimum primary insurance amount of \$202.30 effective June 1979, \$231.30 effective June 1980, and \$257.30 effective June 1981. (See appendices V and VI.) Since her special minimum primary insurance amount is higher than the primary insurance amounts computed for her under the other methods described in this subpart for which she is eligible, her benefits (and those of her family) are based on the special minimum primary insurance amount.

[47 FR 30734, July 15, 1982, as amended at 48 FR 46143, Oct. 11, 1983]

COST-OF-LIVING INCREASES

§ 404.270 Cost-of-living increases.

Your primary insurance amount may be automatically increased each December so it keeps up with rises in the cost of living. These automatic increases also apply to other benefit amounts, as described in § 404.271.

[47 FR 30734, July 15, 1982, as amended at 51 FR 12603, Apr. 14, 1986]

§ 404.271 When automatic cost-of-living increases apply.

Besides increases in the primary insurance amounts of current beneficiaries, automatic cost-of-living increases also apply to—

(a) The benefits of certain uninsured people age 72 and older (see § 404.380);

(b) The special minimum primary insurance amounts (described in §§ 404.260 through 404.261) of current and future beneficiaries;

(c) The primary insurance amounts of people who after 1978 become eligible for benefits or die before becoming eligible (beginning with December of the year they become eligible or die), although certain limitations are placed on the automatic adjustment of the frozen minimum primary insurance amount (as described in § 404.277); and

(d) The *maximum family benefit amounts* in column V of the benefit table in appendix III.

[47 FR 30734, July 15, 1982, as amended at 51 FR 12603, Apr. 14, 1986]

20 CFR Ch. III (4–1–04 Edition)

§ 404.272 Indexes we use to measure the rise in the cost-of-living.

(a) *The bases.* To measure increases in the cost-of-living for annual automatic increase purposes, we use either:

(1) The revised Consumer Price Index (CPI) for urban wage earners and clerical workers as published by the Department of Labor, or

(2) The average wage index (AWI), which is the average of the annual total wages that we use to index (i.e., update) a worker's past earnings when we compute his or her primary insurance amount (§ 404.211(c)).

(b) *Effect of the OASDI fund ratio.* Which of these indexes we use to measure increases in the cost-of-living depends on the Old-Age, Survivors, and Disability Insurance (OASDI) fund ratio.

(c) *OASDI fund ratio for years after 1984.* For purposes of cost-of-living increases, the OASDI fund ratio is the ratio of the combined assets in the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund (see section 201 of the Social Security Act) on January 1 of a given year, to the estimated expenditures from the Funds in the same year. The January 1 balance consists of the assets (i.e., government bonds and cash) in the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, plus Federal Insurance Contributions Act (FICA) and Self-Employment Contributions Act (SECA) taxes transferred to these trust funds on January 1 of the given year, minus the outstanding amounts (principal and interest) owed to the Federal Hospital Insurance Trust Fund as a result of interfund loans. Estimated expenditures are amounts we expect to pay from the Old-Age and Survivors Insurance and the Disability Insurance Trust Funds during the year, including the net amount that we pay into the Railroad Retirement Account, but excluding principal repayments and interest payments to the Hospital Insurance Trust Fund and transfer payments between the Old-Age and Survivors Insurance and the Disability Insurance Trust Funds. The ratio as calculated under this rule is rounded to the nearest 0.1 percent.

(d) *Which index we use.* We use the CPI if the OASDI fund ratio is 15.0 percent or more for any year from 1984 through 1988, and if the ratio is 20.0 percent or more for any year after 1988. We use either the CPI or the AWI, depending on which has the lower percentage increase in the applicable measuring period (see § 404.274), if the OASDI fund ratio is less than 15.0 percent for any year from 1984 through 1988, and if the ratio is less than 20.0 percent for any year after 1988. For example, if the OASDI fund ratio for a year is 17.0 percent, the cost-of-living increase effective December of that year will be based on the CPI.

[51 FR 12603, Apr. 14, 1986]

§ 404.273 When automatic cost-of-living increases are to be made.

We make automatic cost-of-living increases if the applicable index, either the CPI or the AWI, rises by 3.0 percent or more over a specified measuring period (see the rules in § 404.274). If the cost-of-living increase is to be based on an increase of 3.0 percent or more in the CPI, the increase becomes effective in December of the year in which the measuring period ends. If the increase is to be based on an increase of 3.0 percent or more in the AWI, the increase becomes effective in December of the year after the year in which the measuring period ends.

[51 FR 12603, Apr. 14, 1986]

§ 404.274 Measuring the increase in the indexes.

(a) *General.* Depending on the OASDI fund ratio, we measure the rise in one index or in both indexes during the applicable measuring period (described in paragraphs (b) and (c) of this section) to determine whether there will be an automatic cost-of-living increase and if so, its amount.

(b) *Measuring period based on CPI.* For the increase effective December 1984 and later years, the measuring period we use for finding the amount of the CPI increase—

(1) Begins with—

(i) Any calendar quarter in which an *ad hoc* benefit increase is effective; or, if later,

(ii) The third calendar quarter of any year in which the last automatic increase became effective; and

(2) Ends with the third calendar quarter of the following year, but only if the CPI has increased by at least 3.0 percent (after rounding to the nearest one-tenth of one percent) since the beginning of the measuring period. (If the CPI increase is less than 3.0 percent, we extend the measuring period to the third quarter of the next year, doing so repeatedly until the 3.0 percent level is reached.) If this measuring period ends in a year after the year in which an *ad hoc* increase was enacted into law or took effect, there can be no cost-of-living increase based on this measuring period, and we will apply the rule in paragraph (d) of this section.

(c) *Measuring period based on AWI.* The measuring period we use for finding the amount of the AWI increase—

(1) Begins with—

(i) The calendar year before the year in which an *ad hoc* benefit increase is effective; or, if later,

(ii) The calendar year before the year in which the last automatic increase became effective; and

(2) Ends with the following year, but only if the AWI has increased by at least 3.0 percent (after rounding to the nearest one-tenth of one percent) in that one-year period. (If the AWI increase is less than 3.0 percent, we extend the measuring period to the next year, doing so repeatedly until the 3.0 percent level is reached.) If this measuring period ends in a year in which an *ad hoc* increase was enacted into law or took effect, there can be no cost-of-living increase based on this measuring period, and we will apply the rule in paragraph (d) of this section.

(d) *When no automatic cost-of-living increase is possible.* No automatic cost-of-living increase is possible for the calendar year that immediately follows a year in which an *ad hoc* increase was enacted into law or took effect. The measuring period for the next automatic cost-of-living increase—

(1) Where the measuring period is based on the CPI,

(i) Begins with the calendar quarter in which the *ad hoc* increase took effect; and
