

before we can reliably detect the disease in its earliest stages when treatment is most effective. I urge all women to talk to their doctors about ovarian cancer and the best course of action to detect and treat this deadly disease. Doing so is particularly important for women aged 40 or older, those with a family history of ovarian cancer, and those with a personal history of breast, endometrial, or colon cancer. And I urge individuals across the country to learn more about this disease and what can be done to reduce the number of individuals who suffer from it.

In addition to encouraging early detection and increasing awareness about ovarian cancer, we must continue to advance our knowledge through research. Scientists at the Centers for Disease Control and Prevention, the National Cancer Institute, the Department of Defense, the Food and Drug Administration, other Federal agencies, and private companies are working hard to discover the causes of ovarian cancer and to design more effective screening and treatment options. Through their research, we hope to learn how to reduce the chances of developing this disease, how to recognize it in its earliest stages, and how to successfully treat women in every stage of ovarian cancer. The vision and determination of these professionals, along with the courage of the women who participate in clinical trials, are helping to turn today's research advances into tomorrow's success stories.

My Administration remains committed to supporting research efforts to help find a cure for ovarian cancer. My fiscal year 2004 budget proposal includes more than \$5.6 billion for cancer research at the National Institutes of Health. This investment will lead to a better understanding of ovarian cancer and greater hope for women who suffer from this disease. Through education and continued research, we can win the fight against ovarian cancer and save the lives of thousands of American women.

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim September 2003 as National Ovarian Cancer Awareness Month. I call upon the people of the United States to observe this month with appropriate programs and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of September, in the year of our Lord two thousand three, and of the Independence of the United States of America the two hundred and twenty-eighth.

GEORGE W. BUSH

#### **Proclamation 7700 of September 1, 2003**

#### **National Prostate Cancer Awareness Month, 2003**

*By the President of the United States of America  
A Proclamation*

Prostate cancer is the second most common form of cancer among men in the United States. This year alone, it is estimated that more than 220,000 new cases of prostate cancer will be diagnosed and that nearly 29,000 men will die from this disease. During National Prostate Cancer Awareness Month, we seek to increase understanding about the risk factors of prostate

cancer, the importance of a healthy lifestyle, and the benefits of detecting the disease in its earliest stages, when it is most treatable.

Although the exact cause of prostate cancer is unknown, several factors have been found to increase the risk of developing this disease. Men aged 65 years or older make up about 70 percent of all diagnosed prostate cancer cases. In addition, a man's risk of developing prostate cancer doubles if a father or brother has been diagnosed with the disease.

Making healthy choices is critical to prevent prostate cancer and many other diseases. Research suggests that some men may be able to reduce their risk of prostate cancer by eating healthy foods and exercising on a regular basis.

Early detection is important in successfully treating prostate cancer. Preventative screenings can reveal a man's current health status and identify whether he needs to adjust his diet or behavior. I urge men, particularly those over 50, to learn more about the disease and to talk to their doctors about when to start preventative screening. Healthcare providers can advise men as to which tests are most appropriate. Through early detection and treatment, we can reduce the number of deaths caused by prostate cancer.

Today, our Nation is on the leading edge of new discoveries. As we continue to make advancements in medicine, my Administration remains committed to learning the causes of prostate cancer and finding a cure. My fiscal year 2004 budget proposal includes more than \$13 million for the Centers for Disease Control and Prevention to conduct, support, and promote efforts that increase awareness of screening and early detection, and more than \$5.6 billion for cancer research at the National Institutes of Health. Through my HealthierUS Initiative, my Administration is also encouraging all citizens to lead healthier lives by eating right, exercising, and taking advantage of preventative screening. By working together, we will improve our ability to prevent, treat, and cure prostate cancer.

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim September 2003 as National Prostate Cancer Awareness Month. I call upon government officials, businesses, communities, healthcare professionals, educators, volunteers, and all people of the United States to reaffirm our Nation's strong and continuing commitment to prevent, treat, and cure prostate cancer.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of September, in the year of our Lord two thousand three, and of the Independence of the United States of America the two hundred and twenty-eighth.

GEORGE W. BUSH
