

quality standards or coastal zone management programs. District engineers are authorized and encouraged to develop MOAs with states and other Federal agencies for Corps projects involving the discharge of dredged or fill material. Copies of all MOAs will be forwarded to CECW-D, Office of the Chief of Engineers, Washington, DC 20314-1000 for approval.

§ 337.5 General authorizations.

Under the provisions of sections 404(e) of the CWA and 104(c) of the ODA certain categories of activities may be authorized on a regional, statewide, or nationwide basis. General authorizations can be a useful mechanism for implementation of the procedural provisions of the CWA, CZMA, and ODA while avoiding unnecessary duplication and paperwork. Through the general authorization process, compliance with all environmental laws and regulations including coastal zone consistency, if applicable, and water quality certification can be accomplished in a single process for a category of activities. Since the emphasis of particular environmental issues for most Corps projects is more regional than nationwide, district engineers are encouraged to develop general authorizations for routine Civil Works activities involving the discharge of dredged or fill material to address the specific requirements of a particular geographic region. When evaluating general categories of activities, the district engineer should follow the same procedure as outlined for individual Federal activities including the water quality certification and/or coastal zone consistency requirements of part 336 of this chapter. General authorizations should include related activities of local interests. Additionally, district engineers should use existing general permits authorized on a statewide or regional basis and the nationwide permits at 33 CFR part 330 for Federal projects involving the disposal of dredged material. The development of new statewide or regional general authorizations for Federal activities should be in accordance with the requirements of §§ 336.1 and 336.2 of this chapter. General permits for related activities of local interests should be

developed using the procedures of 33 CFR parts 320 through 330.

§ 337.6 Statement of Findings (SOF).

Upon completion of the evaluation process including required coordination, receipt or waiver of required state certifications, and completion of the appropriate environmental documents, an SOF will be prepared. In cases involving an EIS, a ROD will be prepared in accordance with 33 CFR part 230 and should be used in lieu of the SOF, providing the substantive parts of this section are included in the ROD. The SOF need not duplicate information contained in supporting environmental documents but rather may incorporate it by reference. The SOF should include a comprehensive summary and record of compliance and should be prepared in the following format except that the procedures of 33 CFR 325.2 should be followed for related activities of local interests.

(a) The SOF should identify the name of the preparer, date (which may not necessarily correspond to the date signed), and name of waterway.

(b) The proposed action for which the findings are made should be described.

(c) A coordination section should be provided. The coordination section should reference the public notice number and date. The letters of comment and appropriate responses should be summarized. Any coordination undertaken by local or state agencies should also be discussed.

(d) An environmental effects and impacts section should be used to document compliance with the applicable environmental laws. This section should include the views and/or conditions of the state concerning water quality certification and, if required, the results of the coastal zone consistency process.

(e) A determinations section should reference the results of the EA and/or EIS and any conditions necessary to meet the state's water quality standards or coastal zone management program. Appropriate conditions or modifications should be included in the project specifications. This section should also contain a subsection on consideration of alternatives and cumulative impacts.
