

§ 337.7

(f) A section on the district engineer's findings and conclusions concerning the proposed project should be included.

(g) The SOF should be dated and signed by the district engineer or his designee except in those cases requiring referral to higher authority.

(h) In accordance with the provisions of section 104(g) of the ODA, the district engineer will forward a copy of the SOF to the District Commander, U.S. Coast Guard, if the activity involves the ocean disposal of dredged material.

(i) The Findings of No Significant Impact or ROD, as appropriate, required by 33 CFR part 230 may be incorporated into the SOF, as appropriate.

§ 337.7 Emergency actions.

After obtaining approval from the division engineer, the district engineer will respond to emergency situations on an expedited basis, complying with the procedures of this regulation to the maximum degree practicable. The district engineer will issue a public notice describing the emergency in accordance with § 337.1, if such a notice is practicable in view of the emergency situation; such a public notice should be forwarded to all appropriate Federal and state agencies. The district engineer should prepare a section 404(b)(1) evaluation report and, as necessary, an environmental assessment, if this is practicable in view of the emergency situation. If comments are received from the public notice which, in the judgment of the district engineer, reveal the necessity of modifying the emergency operation, the district engineer should take appropriate measures to modify the emergency operation to reduce, avoid, or minimize adverse environmental impacts. If the district engineer, after receiving comments from the public notice, determines that the emergency action would constitute a major Federal action significantly affecting the quality of the human environment, he should, after consultation with the division engineer, coordinate with the Council on Environmental Quality about alternative arrangements for compliance with the NEPA in accordance with 40 CFR 1506.11 to the extent that it is practicable in view

33 CFR Ch. II (7-1-04 Edition)

of the emergency situation. District engineers should consult with the appropriate state officials to seek water quality certification or waiver of certification, and should certify that the Federal action is consistent to the maximum extent practicable with an approved coastal zone management plan for emergency activities, to the extent that is practicable in view of the emergency.

§ 337.8 Reports to higher echelons.

(a) *Certain activities involving the discharge of dredged or fill material require action by the division engineer or Chief of Engineers.* Such reports should be prepared in the format described in paragraph (b) of this section. Reports may be necessary in the following situations:

(1) When there is substantial doubt as to the authority, law, regulations, or policies applicable to the Federal project;

(2) When higher authority requests the case be forwarded for decision;

(3) When the state does not concur in a coastal zone consistency determination or attempts to concur with conditions or controls;

(4) When the state denies or unreasonably delays a water quality certification or issues the certification with conditions or controls not related to maintenance or enforcement of state water quality standards or significantly exceeding the Federal standard;

(5) When the regional administrator has advised the district engineer, pursuant to section 404(c) of the CWA, of his intent to prohibit or restrict the use of a specified discharge site; or notifies the district engineer that the discharge of dredged material in ocean waters or territorial seas will not comply with the criteria and restrictions on the use of the site established under the ODA; and the district engineer determines that the proposed disposal cannot be reasonably modified to alleviate the regional administrator's objections; and

(6) When the state fails to grant water quality certification or a waiver of certification or concurrence or waiver of coastal zone consistency for emergency actions.
