

§91.102

7 CFR Ch. I (1-1-05 Edition)

Test. To perform chemical, microbiological, or physical analyses on a sample to determine presence and levels or amounts of a substance or living organism of interest.

USDA. The abbreviation for the United States Department of Agriculture.

§91.102 Form of official identification symbols.

Two information symbols in the form of AMS shields indicate commodity testing at an AMS laboratory listed in §91.5 of this part. The AMS shield set forth in figure 1 of this section, containing the words "USDA AMS TESTED", and the shield set forth in figure 2, containing the words "USDA LABORATORY TESTED FOR EXPORT" have been approved by the USDA Office of Communications to be added to the USDA/AMS inventory of symbols. Each example of an AMS shield has a black and white background; however the standard red, white and blue colors are approved for the shields. They are approved for use with AMS materials. Shields with the same wording that are similar in form and design to the examples in figures 1 and 2 of this section may also be used.

PART 92—TOBACCO

Sec.

- 92.1 General.
- 92.2 Definitions.
- 92.3 Location for laboratory testing and kind of services available.
- 92.4 Approved forms for reporting analytical results.
- 92.5 Analytical methods.
- 92.6 Cost for pesticide analysis set by cooperative agreement.

AUTHORITY: 7 U.S.C. 511m, 511r.

SOURCE: 58 FR 42424, Aug. 9, 1993, unless otherwise noted.

§ 92.1 General.

Analytical testing of imported flue-cured and burley tobacco is performed for maximum allowable pesticide residue levels. Domestic grown tobacco may also be analyzed for pesticide residues at the Science and Technology's Eastern Laboratory facility.

[58 FR 42424, Aug. 9, 1993, as amended at 61 FR 51350, Oct. 2, 1996; 61 FR 55840, Oct. 29, 1996; 65 FR 64315, Oct. 26, 2000]

§ 92.2 Definitions.

Words used in the regulations in this part in the singular form will import the plural, and vice versa, as the case may demand. As used throughout the regulations in this part, unless the context requires otherwise, the following terms will be construed to mean:

Air-cured. Tobacco cured under natural atmospheric conditions. Artificial heat is sometimes used to control excess humidity during the curing period to prevent house-burn, barn-burn and pole-burn in damp weather. Air-cured tobacco should not carry the odor of smoke or fumes resulting from the application of artificial heat.

AMS. The abbreviations for the Agricultural Marketing Service (AMS) agency of the United States Department of Agriculture.

Burley. A thin to medium-bodied tobacco, usually a light tan to reddish-brown in color.

Burley, Type 93. That type of air-cured tobacco commonly known as foreign-grown Burley, produced in countries other than the United States.

Certificate of Analysis (Form TB-92). A legal document on which the confirmed test results for official samples will be testified to be correct by a Science and Technology chemist in charge of testing.

Cured. Tobacco dried of its sap by either natural or artificial processes.

2,4-D. The common abbreviation for the acid herbicide 2,4-Dichlorophenoxyacetic acid.

DBCP. The common abbreviation for the volatile fumigant pesticide 1,2-Dibromo-3-chloropropane.

DDE. The common abbreviation for the chlorinated pesticide Dichlorodiphenyldichloroethylene. Degradation product of DDT by loss of one molecule of hydrochloric acid or

referred to as a dehydrohalogenation process.

DDT. The common abbreviation for Dichloro diphenyl trichloroethane or the common name for the chlorinated insecticide or contact poison 1,1-Bis(p-chlorophenyl)-2,2,2-trichloroethane.

Dicamba. The common name for the acid herbicide 2-Methoxy-3,6-dichlorobenzoic acid.

EDB. The common abbreviation for Ethylene dibromide or the common name for the volatile fumigant pesticide 1,2-Dibromoethane.

Flue-cured. Tobacco cured under artificial atmospheric conditions by a process of regulating the heat and ventilation without allowing smoke or fumes from the fuel to come in contact with the tobacco; or tobacco cured by some other process which accomplishes the same results.

Flue-cured, Type 92. That type of flue-cured tobacco commonly known as Foreign-grown Flue-cured, produced in countries other than the United States.

Formothion. The common name for the organophosphorus pesticide S-(2-(Formylmethylamino)-2-oxoethyl) O-O-dimethyl phosphorodithioate.

HCB. The common abbreviation for the organochlorine pesticide Hexachlorobenzene.

Lot. A unit of shipment of tobacco encompassed by a single invoice. The lot may represent a pile, basket, bulk, hack, burden, or more than one bale, case, hogshead, tierce, package, or other definite package unit.

Maximum pesticide residue level. The maximum concentration of residue allowable for a specific pesticide or combination of pesticides, as set forth in 7 CFR 29.427 by the AMS Deputy Administrator of the Tobacco Programs.

Pesticide. Any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, and any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant.

Pesticide certification. A document issued by the Tobacco Programs in a form approved by its AMS Deputy Administrator, containing a certification by the importer that flue-cured and burley tobacco offered for importation does not exceed the maximum allowable residue levels of any pesticide that
