

(e) The Board recognizes that both the junior bank's claim on the account party and the senior bank's claim on the junior bank involve risk. Therefore, it is essential that these risks be assessed by the banks involved in accordance with prudent and sound banking practices. The examiners will in the normal course of the examination process review the risk assessment procedures instituted by the banks. The junior bank should review the creditworthiness of each account party when the junior bank acquires a participation and the senior bank should review on an ongoing basis the creditworthiness of the junior bank. Junior bank agreement to rely exclusively upon the credit judgment of the senior bank and purchase on an ongoing basis from the senior bank all participations in BAs regardless of the identity of the account party is not appropriate in view of the risks involved. However, in those cases involving a participation between a parent bank and its Edge affiliate where the credit review for both entities is performed by the parent bank, the Edge Corporation should maintain documentation indicating that it concurs with the parent bank's analysis and that the acceptance participation is appropriate for inclusion in the Edge Corporation's portfolio.

(f) Similarly, the Board has determined that it is appropriate to include the risks incurred by the senior bank in assessing the senior bank's capital and the risks incurred by the junior bank in assessing the junior bank's capital.

(g) In view of this clarification of the issues relating to participations in BAs, the Board encourages the private sector to develop standardized forms for BAs and participations therein that clearly delineate the rights and responsibilities of the relevant parties.

(Sec. 13, Federal Reserve Act (12 U.S.C. 372))
[48 FR 57109, Dec. 23, 1983]

§ 250.166 Treatment of mandatory convertible debt and subordinated notes of state member banks and bank holding companies as "capital".

(a) *General.* Under the Board's risk-based capital guidelines, state member banks and bank holding companies

may include in Tier 2 capital subordinated debt and mandatory convertible debt that meets certain criteria. The purpose of this interpretation is to clarify these criteria. This interpretation should be read with those guidelines, particularly with paragraphs II.c. through II.e. of appendix A of 12 CFR part 208 if the issuer is a state member bank and with paragraphs II.A.2.c. and II.A.2.d. of appendix A of 12 CFR part 225 if the issuer is a bank holding company.

(b) *Criteria for subordinated debt included in capital—(1) Characteristics.* To be included in Tier 2 capital under the Board's risk-based capital guidelines for state member banks and bank holding companies, subordinated debt must be subordinated in right of payment to the claims of the issuer's general creditors¹ and, for banks, to the claims of depositors as well; must be unsecured; must state clearly on its face that it is not a deposit and is not insured by a federal agency; must have a minimum average maturity of five years;² must not contain provisions that permit debtholders to accelerate payment of principal prior to maturity except in the event of bankruptcy of or the appointment of a receiver for the issuing organization; must not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practice; and must not be credit sensitive.

(2) *Acceleration clauses—(i)* In order to be included in Tier 2 capital, the appendices provide that subordinated debt instruments must have an original weighted average maturity of at least five years. For this purpose, maturity is defined as the earliest possible date on which the holder can put the instrument back to the issuing banking organization. Since acceleration clauses permit the holder to put the

¹ The risk-based capital guidelines for bank holding companies state that bank holding company debt must be subordinated to all senior indebtedness of the company. To meet this requirement, the debt should be subordinated to all general creditors.

² The "average maturity" of an obligation or issue repayable in scheduled periodic payments shall be the weighted average of the maturities of all such scheduled payments.

debt back upon the occurrence of certain events, which could happen at any time after the instrument is issued, subordinated debt that includes provisions permitting acceleration upon events other than bankruptcy or reorganization under Chapters 7 (Liquidation) and 11 (Reorganization) of the Bankruptcy Code, in the case of a bank holding company, or insolvency—i.e., the appointment of a receiver—in the case of a state member bank, does not qualify for inclusion in Tier 2 capital.

(ii) Further, subordinated debt whose terms provide for acceleration upon the occurrence of events other than bankruptcy or the appointment of a receiver does not qualify as Tier 2 capital. For example, the terms of some subordinated debt issues would permit debtholders to accelerate repayment if the issuer failed to pay principal or interest on the subordinated debt issue when due (or within a certain time-frame after the due date), failed to make mandatory sinking fund deposits, defaulted on any other debt, failed to honor covenants, or if an institution affiliated with the issuer entered into bankruptcy or receivership. Some banking organizations have also issued, or proposed to issue, subordinated debt that would allow debtholders to accelerate repayment if, for example, the banking organization failed to maintain certain prescribed minimum capital ratios or rates of return, or if the amount of nonperforming assets or charge-offs of the banking organization exceeded a certain level.

(iii) These and other similar acceleration clauses raise significant supervisory concerns because repayment of the debt could be accelerated at a time when an organization may be experiencing financial difficulties. Acceleration of the debt could restrict the ability of the organization to resolve its problems in the normal course of business and could cause the organization involuntarily to enter into bankruptcy or receivership. Furthermore, since such acceleration clauses could allow the holders of subordinated debt to be paid ahead of general creditors or depositors, their inclusion in a debt issue throws into question whether the debt is, in fact, subordinated.

(iv) Subordinated debt issues whose terms state that the debtholders may accelerate the repayment of principal only in the event of bankruptcy or receivership of the issuer do not permit the holders of the debt to be paid before general creditors or depositors and do not raise supervisory concerns because the acceleration does not occur until the institution has failed. Accordingly, debt issues that permit acceleration of principal only in the event of bankruptcy (liquidation or reorganization) in the case of bank holding companies and receivership in the case of banks may generally be classified as capital.

(3) *Provisions inconsistent with safe and sound banking practices*—(i) The risk-based capital guidelines state that instruments included in capital may not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practice. As a general matter, capital instruments should not contain terms that could adversely affect liquidity or unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty, or that could limit the regulator's ability to resolve problem bank situations. For example, some subordinated debt includes covenants that would not allow the banking organization to make additional secured or senior borrowings. Other covenants would prohibit a banking organization from disposing of a major subsidiary or undergoing a change in control. Such covenants could restrict the banking organization's ability to raise funds to meet its liquidity needs. In addition, such terms or conditions limit the ability of bank supervisors to resolve problem bank situations through a change in control.

(ii) Certain other provisions found in subordinated debt may provide protection to investors in subordinated debt without adversely affecting the overall benefits of the instrument to the organization. For example, some instruments include covenants that may require the banking organization to:

- (A) Maintain an office or agency where securities may be presented,
- (B) Hold payments on the securities in trust,

(C) Preserve the rights and franchises of the company,

(D) Pay taxes and assessments before they become delinquent,

(E) Provide an annual statement of compliance on whether the company has observed all conditions of the debt agreement, or

(F) Maintain its properties in good condition. Such covenants, as long as they do not unduly restrict the activity of the banking organization, generally would be acceptable in qualifying subordinated debt, provided that failure to meet them does not give the holders of the debt the right to accelerate the debt.³

(4) *Credit sensitive features.* Credit sensitive subordinated debt (including mandatory convertible securities) where payments are tied to the financial condition of the borrower generally do not qualify for inclusion in capital. Interest rate payments may be linked to the financial condition of an institution through various ways, such as through an auction rate mechanism, a preset schedule that either mandates interest rate increases as the credit rating of the institution declines or automatically increases them over the passage of time,⁴ or that raises the in-

³This notice does not attempt to list or address all clauses included in subordinated debt; rather, it is intended to give general supervisory guidance regarding the types of clauses that could raise supervisory concerns. Issuers of subordinated debt may need to consult further with Federal Reserve staff about other subordinated debt provisions not specifically discussed above to determine whether such provisions are appropriate in a debt capital instrument.

⁴Although payments on debt whose interest rate increases over time on the surface may not appear to be directly linked to the financial condition of the issuing organization, such debt (sometimes referred to as expanding or exploding rate debt) has a strong potential to be credit sensitive in substance. Organizations whose financial condition has strengthened are more likely to be able to refinance the debt at a rate lower than that mandated by the preset increase, whereas institutions whose condition has deteriorated are less likely to be able to do so. Moreover, just when these latter institutions would be in the most need of conserving capital, they would be under strong pressure to redeem the debt as an alternative to paying higher

interest rate if payment is not made in a timely fashion.⁵ As the financial condition of an organization declines, it is faced with higher and higher payments on its credit sensitive subordinated debt at a time when it most needs to conserve its resources. Thus, credit sensitive debt does not provide the support expected of a capital instrument to an institution whose financial condition is deteriorating; rather, the credit sensitive feature can accelerate depletion of the institution's resources and increase the likelihood of default on the debt.

(c) *Criteria for mandatory convertible debt included in capital.* Mandatory convertible debt included in capital must meet all the criteria cited above for subordinated debt with the exception of the minimum maturity requirement.⁶ Since mandatory convertible debt eventually converts to an equity instrument, it has no minimum maturity requirement. Such debt, however, is subject to a maximum maturity requirement of 12 years.

(d) *Previously issued subordinated debt.* Subordinated debt including mandatory convertible debt that has been issued prior to the date of this interpretation and that contains provisions permitting acceleration for reasons other than bankruptcy or receivership of the issuing institution; includes other questionable terms or conditions; or that is credit sensitive will not automatically be excluded from capital. Rather, such debt will be considered on a case-by-case basis to determine whether it qualifies as Tier 2 capital. As a general matter, subordinated debt issued prior to the release of this interpretation and containing such

rates and, thus, would accelerate depletion of their resources.

⁵While such terms may be acceptable in perpetual preferred stock qualifying as Tier 2 capital, it would be inconsistent with safe and sound banking practice to include debt with such terms in Tier 2 capital. The organization does not have the option, as it does with auction rate preferred stock issues, of eliminating the higher payments on the subordinated debt without going into default.

⁶Mandatory convertible debt is subordinated debt that contains provisions committing the issuing organization to repay the principal from the proceeds of future equity issues.

provisions or features may qualify as Tier 2 capital so long as these terms:

(1) have been commonly used by banking organizations,

(2) do not provide an unreasonably high degree of protection to the holder in cases not involving bankruptcy or receivership, and

(3) do not effectively allow the holder to stand ahead of the general creditors of the issuing institution in cases of bankruptcy or receivership.

Subordinated debt containing provisions that permit the holders of the debt to accelerate payment of principal when the banking organization begins to experience difficulties, for example, when it fails to meet certain financial ratios, such as capital ratios or rates of return, does not meet these three criteria. Consequently, subordinated debt issued prior to the release of this interpretation containing such provisions may not be included within Tier 2 capital.

(e) *Limitations on the amount of subordinated debt in capital—(1) Basic limitation.* The amount of subordinated debt an institution may include in Tier 2 capital is limited to 50 percent of the amount of the institution's Tier 1 capital. The amount of a subordinated debt issue that may be included in Tier 2 capital is discounted as it approaches maturity; one-fifth of the original amount of the instrument, less any redemptions, is excluded each year from Tier 2 capital during the last five years prior to maturity. If the instrument has a serial redemption feature such that, for example, half matures in seven years and half matures in ten years, the issuing organization should begin discounting the seven-year portion after two years and the ten-year portion after five years.

(2) *Treatment of debt with dedicated proceeds.* If a banking organization has issued common or preferred stock and dedicated the proceeds to the redemption of a mandatory convertible debt security, that portion of the security covered by the amount of the proceeds so dedicated is considered to be ordinary subordinated debt for capital purposes, provided the proceeds are not placed in a sinking fund, trust fund, or similar segregated account or are not used in the interim for some other pur-

pose. Thus, dedicated portions of mandatory convertible debt securities are subject, like other subordinated debt, to the 50 percent sublimit within Tier 2 capital, as well as to discounting in the last five years of life. Undedicated portions of mandatory convertible debt may be included in Tier 2 capital without any sublimit and are not subject to discounting.

(3) *Treatment of debt with segregated funds.* In some cases, the provisions in mandatory convertible debt issues may require the issuing banking organization to set up a sinking fund, trust fund, or similar segregated account to hold the proceeds from the sale of equity securities dedicated to pay off the principal of the mandatory convertible debt at maturity. The portion of mandatory convertibles covered by the amount of proceeds deposited in such a segregated fund is considered secured and, thus, may not be included in capital at all, let alone be treated as subordinated debt that is subject to the 50 percent sublimit within Tier 2 capital. The maintenance of such separate segregated funds for the redemption of mandatory convertible debt exceeds the requirements of appendix B to Regulation Y. Accordingly, if a banking organization, with the agreement of its debtholders, seeks Federal Reserve approval to eliminate such a fund, approval normally would be given unless supervisory concerns warrant otherwise.

(f) *Redemption of subordinated debt prior to maturity—(1) By state member banks.* State member banks must obtain approval from the appropriate Reserve Bank prior to redeeming before maturity subordinated debt or mandatory convertible debt included in capital.⁷ A Reserve Bank will not approve such early redemption unless it is satisfied that the capital position of the bank will be adequate after the proposed redemption.

⁷Some agreements governing mandatory convertible debt issued prior to the risk-based capital guidelines provide that the bank may redeem the notes if they no longer count as primary capital as defined in appendix B to Regulation Y. Such a provision does not obviate the requirement to receive Federal Reserve approval prior to redemption.

§ 250.180

(2) *By bank holding companies.* While bank holding companies are not formally required to obtain approval prior to redeeming subordinated debt, the risk-based capital guidelines state that bank holding companies should consult with the Federal Reserve before redeeming any capital instruments prior to stated maturity. This also applies to any redemption of mandatory convertible debt with proceeds of an equity issuance that were dedicated to the redemption of that debt. Accordingly, a bank holding company should consult with its Reserve Bank prior to redeeming subordinated debt or dedicated portions of mandatory convertible debt included in capital. A Reserve Bank generally will not acquiesce to such a redemption unless it is satisfied that the capital position of the bank holding company would be adequate after the proposed redemption.

(3) *Special concerns involving mandatory convertible debt.* Consistent with appendix B to Regulation Y, bank holding companies wishing to redeem before maturity undedicated portions of mandatory convertible debt included in capital are required to receive prior Federal Reserve approval, unless the redemption is effected with the proceeds from the sale or common or perpetual preferred stock. An organization planning to effect such a redemption with the proceeds from the sale of common or perpetual preferred stock is advised to consult informally with its Reserve Bank in order to avoid the possibility of taking an action that could result in weakening its capital position. A Reserve Bank will not approve the redemption of mandatory convertible securities, or acquiesce in such a redemption effected with the sale of common or perpetual preferred stock, unless it is satisfied that the capital position of the bank holding company will be satisfactory after the redemption.⁸

[57 FR 40598, Sept. 4, 1992]

⁸The guidance contained in this paragraph applies to mandatory convertible debt issued prior to the risk-based capital guidelines that state that the banking organization may redeem the notes if they no longer count as primary capital as defined in Appendix B to Regulation Y. Such provisions do

12 CFR Ch. II (1-1-06 Edition)

§ 250.180 Reports of changes in control of management.

(a) Under a statute enacted September 12, 1964 (Pub. L. 88-593; 78 Stat. 940) all insured banks are required to report promptly (1) changes in the outstanding voting stock of the bank which will result in control or in a change in control of the bank and (2) any instances where the bank makes a loan or loans, secured, or to be secured, by 25 percent or more of the outstanding voting stock of an insured bank.

(b) Reports concerning changes in control of a State member bank are to be made by the president or other chief executive officer of the bank, and shall be submitted to the Federal Reserve Bank of its district.

(c) Reports concerning loans by an insured bank on the stock of a State member bank are to be made by the president or other chief executive officer of the lending bank, and shall be submitted to the Federal Reserve Bank of the State member bank on the stock of which the loan was made.

(d) Paragraphs 3 and 4 of this legislation specify the information required in the reports which, in cases involving State member banks, should be addressed to the Vice President in Charge of Examinations of the appropriate Federal Reserve Bank.

(12 U.S.C. 1817)

§ 250.181 Reports of change in control of bank management incident to a merger.

(a) A State member bank has inquired whether Pub. L. 88-593 (78 Stat. 940) requires reports of change in control of bank management in situations where the change occurs as an incident in a merger.

(b) Under the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), no bank with Federal deposit insurance may merge or consolidate with, or acquire the assets of, or assume the liability to pay deposits in, any other insured bank without prior approval of the appropriate Federal bank supervisory agency. Where the bank resulting from any

not obviate the need to consult with, or obtain approval from, the Federal Reserve prior to redemption of the debt.
