

§ 337.3

§ 337.3 Transfer of the section 404 program to the states.

Section 404(g-1) of the CWA allows the Administrator of the EPA to transfer to qualified states administration of the section 404 permit program for discharges into certain waters of the U.S. Once a state's 404 program is approved, the district engineer will follow state procedures developed in accordance with section 404(g-1) of the CWA for all on-going Corps projects involving the discharge of fill material in transferred waters to the state agency responsible for administering the program. Corps projects involving the discharge of dredged or fill material in waters not transferred to the state will be processed in accordance with this regulation.

§ 337.4 Memoranda of Agreement (MOA).

The establishment of joint notification procedures for Corps projects involving disposal of dredged or fill material should be actively pursued through the development of MOAs with the state. The MOAs may be used to define responsibilities between the state and the Corps district involved. The primary purpose of MOAs will be to avoid or eliminate administrative duplication, when such duplication does not contribute to the overall decision-making process. MOAs for purposes of this regulation will not be used to implement provisions not related to the maintenance or enforcement of Federally-approved state water quality standards or coastal zone management programs. District engineers are authorized and encouraged to develop MOAs with states and other Federal agencies for Corps projects involving the discharge of dredged or fill material. Copies of all MOAs will be forwarded to CECW-D, Office of the Chief of Engineers, Washington, DC 20314-1000 for approval.

§ 337.5 General authorizations.

Under the provisions of sections 404(e) of the CWA and 104(c) of the ODA certain categories of activities may be authorized on a regional, statewide, or nationwide basis. General authorizations can be a useful mechanism for implementation of the procedural pro-

33 CFR Ch. II (7-1-06 Edition)

visions of the CWA, CZMA, and ODA while avoiding unnecessary duplication and paperwork. Through the general authorization process, compliance with all environmental laws and regulations including coastal zone consistency, if applicable, and water quality certification can be accomplished in a single process for a category of activities. Since the emphasis of particular environmental issues for most Corps projects is more regional than nationwide, district engineers are encouraged to develop general authorizations for routine Civil Works activities involving the discharge of dredged or fill material to address the specific requirements of a particular geographic region. When evaluating general categories of activities, the district engineer should follow the same procedure as outlined for individual Federal activities including the water quality certification and/or coastal zone consistency requirements of part 336 of this chapter. General authorizations should include related activities of local interests. Additionally, district engineers should use existing general permits authorized on a statewide or regional basis and the nationwide permits at 33 CFR part 330 for Federal projects involving the disposal of dredged material. The development of new statewide or regional general authorizations for Federal activities should be in accordance with the requirements of §§ 336.1 and 336.2 of this chapter. General permits for related activities of local interests should be developed using the procedures of 33 CFR parts 320 through 330.

§ 337.6 Statement of Findings (SOF).

Upon completion of the evaluation process including required coordination, receipt or waiver of required state certifications, and completion of the appropriate environmental documents, an SOF will be prepared. In cases involving an EIS, a ROD will be prepared in accordance with 33 CFR part 230 and should be used in lieu of the SOF, providing the substantive parts of this section are included in the ROD. The SOF need not duplicate information contained in supporting environmental documents but rather may incorporate it by reference. The SOF should include

a comprehensive summary and record of compliance and should be prepared in the following format except that the procedures of 33 CFR 325.2 should be followed for related activities of local interests.

(a) The SOF should identify the name of the preparer, date (which may not necessarily correspond to the date signed), and name of waterway.

(b) The proposed action for which the findings are made should be described.

(c) A coordination section should be provided. The coordination section should reference the public notice number and date. The letters of comment and appropriate responses should be summarized. Any coordination undertaken by local or state agencies should also be discussed.

(d) An environmental effects and impacts section should be used to document compliance with the applicable environmental laws. This section should include the views and/or conditions of the state concerning water quality certification and, if required, the results of the coastal zone consistency process.

(e) A determinations section should reference the results of the EA and/or EIS and any conditions necessary to meet the state's water quality standards or coastal zone management program. Appropriate conditions or modifications should be included in the project specifications. This section should also contain a subsection on consideration of alternatives and cumulative impacts.

(f) A section on the district engineer's findings and conclusions concerning the proposed project should be included.

(g) The SOF should be dated and signed by the district engineer or his designee except in those cases requiring referral to higher authority.

(h) In accordance with the provisions of section 104(g) of the ODA, the district engineer will forward a copy of the SOF to the District Commander, U.S. Coast Guard, if the activity involves the ocean disposal of dredged material.

(i) The Findings of No Significant Impact or ROD, as appropriate, required by 33 CFR part 230 may be incorporated into the SOF, as appropriate.

§ 337.7 Emergency actions.

After obtaining approval from the division engineer, the district engineer will respond to emergency situations on an expedited basis, complying with the procedures of this regulation to the maximum degree practicable. The district engineer will issue a public notice describing the emergency in accordance with § 337.1, if such a notice is practicable in view of the emergency situation; such a public notice should be forwarded to all appropriate Federal and state agencies. The district engineer should prepare a section 404(b)(1) evaluation report and, as necessary, an environmental assessment, if this is practicable in view of the emergency situation. If comments are received from the public notice which, in the judgment of the district engineer, reveal the necessity of modifying the emergency operation, the district engineer should take appropriate measures to modify the emergency operation to reduce, avoid, or minimize adverse environmental impacts. If the district engineer, after receiving comments from the public notice, determines that the emergency action would constitute a major Federal action significantly affecting the quality of the human environment, he should, after consultation with the division engineer, coordinate with the Council on Environmental Quality about alternative arrangements for compliance with the NEPA in accordance with 40 CFR 1506.11 to the extent that it is practicable in view of the emergency situation. District engineers should consult with the appropriate state officials to seek water quality certification or waiver of certification, and should certify that the Federal action is consistent to the maximum extent practicable with an approved coastal zone management plan for emergency activities, to the extent that is practicable in view of the emergency.

§ 337.8 Reports to higher echelons.

(a) *Certain activities involving the discharge of dredged or fill material require action by the division engineer or Chief of Engineers.* Such reports should be prepared in the format described in paragraph (b) of this section. Reports may
