

area during this period will be considered unclaimed or abandoned property and may be disposed of in any manner considered appropriate by the Assistant Administrator or an authorized officer. An owner of such trap, float, or rope remains subject to appropriate civil penalties.

[60 FR 13919, Mar. 15, 1995, as amended at 67 FR 61993, Oct. 3, 2002; 69 FR 18803, Apr. 9, 2004]

§ 654.21 Harvest limitations.

(a) *Claw size.* No person may remove from a stone crab in or from the management area, or possess in the management area, a claw with a propodus measuring less than 2.75 inches (7.0 cm), measured in a straight line from the elbow to the tip of the lower immovable finger. The propodus is the largest section of the claw assembly that has both a movable and immovable finger and is located farthest from the body when the entire appendage is extended. (See Appendix A, Figure 1, of this part.)

(b) *Egg-bearing stone crabs.* An egg-bearing stone crab in or from the management area must be returned immediately to the water unharmed—without removal of a claw. An egg-bearing stone crab may not be stripped of its eggs or otherwise molested.

(c) *Holding stone crabs.* A live stone crab in or from the management area may be held aboard a vessel until such time as a legal-sized claw is removed, provided it is held in a container that is shaded from direct sunlight and it is wet with sea water as necessary to keep it in a damp condition. Containers holding stone crabs must be stacked in a manner that does not compress the crabs. A stone crab body from which a legal-sized claw has been removed must be returned to the sea before the vessel reaches shore or a port or dock.

§ 654.22 Gear restrictions.

(a) *Trap construction requirements.* No person fishing for stone crab may transport on the water or fish with any trap which does not meet the following requirements:

(1) Each trap must be constructed of wood, plastic, or wire.

(2) A trap may be no larger in dimension than 24 by 24 by 24 inches (61 by 61 by 61 cm) or 8.0 ft³ (0.23 m³).

(3) The throats (entrances) to all wood and plastic traps must be located on the top horizontal section of the trap. If the throat is longer in one dimension, the throat size in the longer dimension must not exceed 5½ inches (14.0 cm) and in the shorter dimension must not exceed 3½ inches (9.0 cm). If the throat is round, the throat size must not exceed 5 inches (12.7 cm) in diameter.

(4) In any wire trap used to harvest stone crabs, each throat must be horizontally oriented. The width of the opening where the throat meets the vertical wall of the trap and the opening of the throat at its farthest point from the vertical wall, inside the trap, must be greater than the height of any such opening. No such throat may extend farther than 6 inches (15.2 cm) into the inside of any trap, measured from where the throat opening meets the vertical wall of the trap to the throat opening at its farthest point from the vertical wall, inside the trap.

(5) A wire trap must have at least three unobstructed escape rings installed, each with a minimum inside diameter of 2¾ inches (6.0 cm). One such escape ring must be located on a vertical outer surface adjacent to each crab retaining chamber.

(6) A plastic or wire trap must have a degradable panel.

(i) A plastic trap will be considered to have degradable panel if it contains at least one sidewall with a rectangular opening no smaller in either dimension than that of the throat. This opening may be obstructed only with a cypress or untreated pine slat or slats no thicker than ¾ inch (1.9 cm) such that when the slat degrades, the opening in the sidewall of the trap will no longer be obstructed.

(ii) A wire trap will be considered to have a degradable panel if one of the following methods is used in construction of the trap:

(A) The trap lid tie-down strap is secured to the trap at one end by a single loop of untreated jute twine, a corrodible loop composed of non-coated steel wire measuring 24 gauge or thinner, or an untreated pine dowel no larger than
